

METAR Lamp - Setup Guide

Welcome, and thank you for purchasing the METAR Lightworks Lamp. This guide will help you get your device connected to Wi-Fi, configured to your desired airport, and optionally scheduled to operate during specific times.

Step 1: Powering the Lamp

1. Plug the lamp into a USB power source.
 2. If this is your first time setting it up (or it cannot connect to Wi-Fi), the lamp will create its own Wi-Fi network.
-

Step 2: Connecting to the Lamp's Configuration Page

1. On your phone, tablet, or computer, go to your Wi-Fi settings.
2. Connect to the network named:
METARLightworks
3. Once connected, open your web browser and go to:

<http://192.168.4.1>

Step 3: Wi-Fi Setup

1. You'll see a setup page. Select your home Wi-Fi network from the dropdown list.
2. If you are using a **mesh network** (like Google Nest, Eero, etc.), your SSID might not appear in the dropdown or appear multiple times.

In this case you may need to enter your SSID manually in the field labeled "Or enter manually." This ensures a direct connection.

3. Enter your Wi-Fi password.
 4. Click "**Save Wi-Fi**" — the lamp will reboot and attempt to connect.
-

Step 4: Configuration (After Lamp Connects)

Once connected to your home Wi-Fi:

1. Open your browser and go to the IP address like when setting up Wi-Fi.
2. The configuration page will now allow you to:
 - Change the airport station code (e.g., **KMCO**) will only work with the four character code (Kxxx for US airports).
 - Adjust LED brightness
 - Enable/disable the schedule
 - Set time zone and start/end times for scheduled operation

Scheduling Notes

- If schedule mode is **enabled**, the light will only illuminate between the set hours.
- If you later disable the schedule, the light might take up to 15 min to come back on.

Troubleshooting

- If the light doesn't connect, or you need to change Wi-Fi settings, simply **power cycle** the device.
- If it cannot reconnect, it will again broadcast the **METARLightworks1** Wi-Fi network for configuration.
